

Aadithyaa E

Chennai, India | aadithyaa1107@gmail.com | +91 9789941196 | [LinkedIn](#) | [GitHub](#)

Backend-focused Software Engineering student with hands-on experience in Python, FastAPI, PostgreSQL, MySQL, and Docker, building secure REST APIs, relational schemas, and Generative AI integrations (LangChain, RAG, Gemini, Mistral, ChromaDB) across full-stack platforms with React and TypeScript.

EDUCATION

Shiv Nadar University Chennai <i>B.Tech Computer Science Engineering (Cybersecurity); CGPA: 8.578</i>	Chennai, India 2024 – 2028
P.S Senior Secondary School <i>Senior Secondary Certificate (CBSE); 92.4%</i>	Chennai, India 2024

EXPERIENCE

Intern Developer <i>LateShipment.com</i>	Jun 2026 – Jun 2026 Chennai, India
• Return Management Automation Platform: Engineered a FastAPI backend integrated with Shopify's REST API to automate end-to-end returns (order validation, eligibility checks, tracking); implemented token-based auth, configurable business-rule workflows, and a Mistral-powered AI assistant for customer support. • Secure ERP Backend (Natural-Language SQL Assistant): Architected a secure ERP backend (FastAPI, MySQL) exposing modular REST APIs over a relational schema spanning 2,000+ records. Implemented token-based auth, RBAC, query auditing, and SQL-injection-safe validation; extended it with a natural-language-to-SQL layer (LangChain, Gemini API) on the same validated pipeline.	

PROJECTS

CashPilot AI <i>Financial Management Platform for Small Businesses</i> (GitHub)	
• Tech Stack: React, TypeScript, TanStack Start, FastAPI, Python, PostgreSQL, Google Gemini API, AWS S3, Docker • Backend & Data Architecture: Built modular FastAPI REST APIs with PostgreSQL, JWT auth, user-scoped data, and deterministic calculations for cash-flow analysis, payment prioritization, and runway tracking. • AI Integration: Integrated Google Gemini for invoice data extraction from digital and scanned documents, AI-powered financial insights, CFO assistance, and automated vendor negotiation emails. • Cloud & Deployment: Used AWS S3 with presigned URLs for private document storage and Docker to containerize frontend and backend; deployed on Vercel and Render.	
RepoMind <i>Repository Intelligence Platform</i> (GitHub)	
• Tech Stack: React, TypeScript, FastAPI, ChromaDB, GitPython, Hugging Face, Gemini, Mistral • Platform Overview: Developed a full-stack platform that indexes GitHub repos and lets developers query codebases in natural language, returning source-cited answers grounded in the underlying files. • Ingestion Pipeline: Implemented a multi-stage async pipeline spanning repo cloning, code parsing, semantic chunking, and vector indexing (ChromaDB), with real-time progress tracking exposed through the API. • Backend Architecture: Architected a fault-tolerant, multi-provider LLM layer with automatic failover, ensuring reliable response generation during individual provider outages.	

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL
Frameworks & Libraries: FastAPI, Flask, React, LangChain
Databases: PostgreSQL, MySQL
Backend & APIs: REST APIs, JWT Authentication, RBAC, API Design
Cloud & DevOps: Docker, Kubernetes, CI/CD (GitHub Actions), Git & GitHub, AWS S3, Vercel, Render
Generative AI & ML: Prompt Engineering, RAG, LLMs, Vector Databases, Gemini API, Mistral AI, Hugging Face
Core CS: DSA, System Design, OS, DBMS, Computer Networks, OOP, DevOps

CERTIFICATIONS & ACHIEVEMENTS

College-Level Finalist – Smart India Hackathon 2026: Built CyberChess, an AI-driven cybersecurity system using an LSTM World Model to forecast attack progression, explain predictions via MITRE ATT&CK evidence, and guide mitigation.
College-Level Finalist – Smart India Hackathon 2025: Built a mobile street-sign transliteration system (Flutter, Flask, Tesseract OCR) that detects, transliterates, and vocalizes multilingual street signs for navigation accessibility.
Programming in Java – IIT (NPTEL) 2026: Scored 98% ; OOP, Collections Framework, Exception Handling, Multithreading.
